1.1.49

Let the three sides of the triangle be vectors \mathbf{a} , \mathbf{b} , and \mathbf{c} . The triangle is closed so it must be the case that

$$\mathbf{a} + \mathbf{b} + \mathbf{c} = 0.$$

This gives

$$\mathbf{c} = -(\mathbf{a} + \mathbf{b}).$$

The vector from the midpoint of side \mathbf{a} to the midpoint of side \mathbf{b} is

$$\left(\mathbf{a} + \frac{1}{2}\mathbf{b}\right) - \frac{1}{2}\mathbf{a} = \frac{1}{2}(\mathbf{a} + \mathbf{b})$$

which is parallel with \mathbf{c} and half its length.
